

ARE YOU AWARE

No matter how big or tough a Padlock is it can be broken by one of the three common methods used by thieves/vandals.

1. Twist the Padlock to make the Chain taut then place a spanner around the Padlock body then pull down and turn.

This is called a Leverage Attack.

Very Quick and Very Quiet.

2. Hit the top edge of the Padlock body with a Hammer or Hammer and Cold Chisel or Screwdriver to break apart the Padlock.

3. Bolt Cutter to snap the Shackle or Mild Steel Chain.

Solution ...

the patented, Australian designed and manufactured

"Steel Shroud"

together with Australian made 10mm (3/8 inch) diameter, Freight 70 High Tensile Chain

and an Abus 83/45 Padlock. Includes two keys.
